## **International Level Crossing Awareness Day (ILCAD) on 7 June 2012**

*"The vast majority of fatalities at level crossings, about 98%, are as a result of incorrect use by pedestrians and motorists; sometimes due to error and sometimes due to deliberate violation. That is why the International Level Crossing Awareness Day is so important, so that people learn how to 'Act Safely at Level Crossings'.*

*People need to be aware of the consequences of misbehaviour so that they can use crossings properly and safely. ILCAD brings together road and rail safety experts with a strong commitment to reduce accidents and fatalities at level crossings. The message really can save lives."*
